

Metopia

**Mint Soulbound tokens as your
members' contribution ledger**

DAO / Governance / SBT Protocol

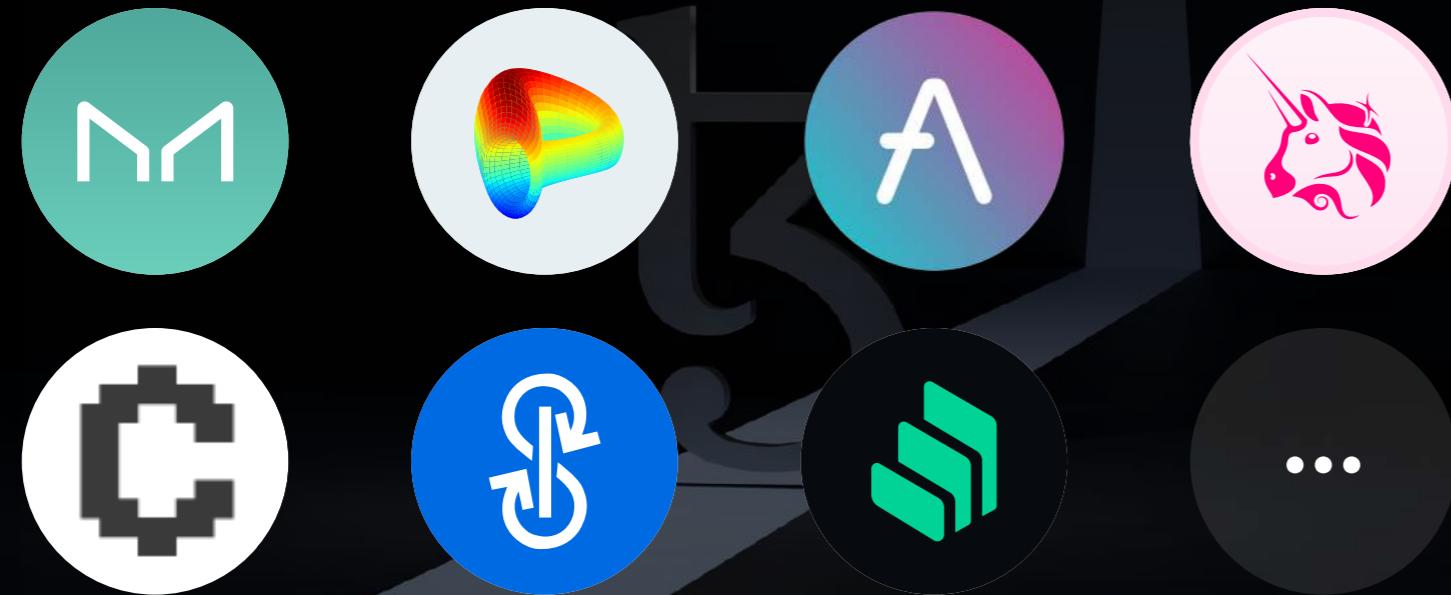

Metopia

The Web 3 Governance Opportunity

Explore and unlock non-financialized governance

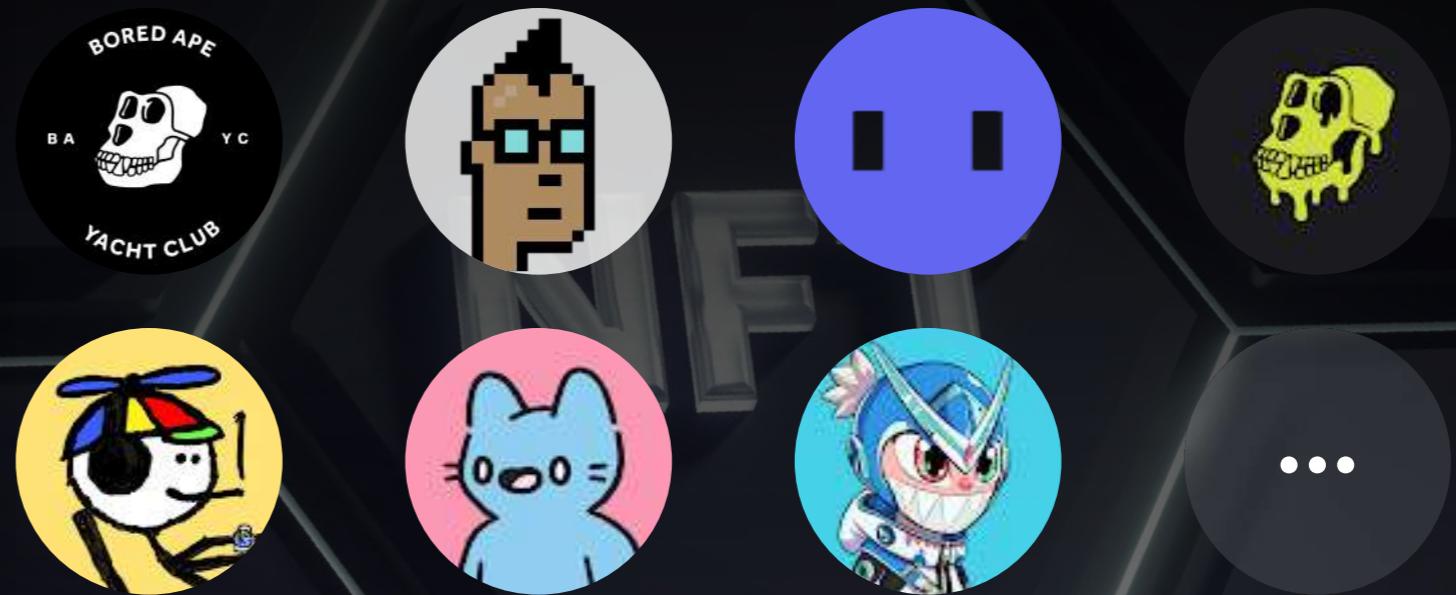

The value of DeFi is captured in TVL

Over **\$60 billion** is captured in by top 10 DeFi protocols

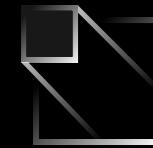

The value of Web 3 can be captured in on-chain NFT governance

Over **\$5 billion** is captured in by top 10 NFT communities

Problems for Communities

Membership Standardization

Communities lack membership tools that offer insight into the commitment and contribution of their members.

Contribution Utilities

After contributing to communities/DAOs, the issuance of "credentials" lack utilities and services that continue to generate perks and benefits to its holders.

Incentive System

DAOs lack the tools and instruments to encourage governance participation and lack tools to continue incentivizing contributing members.

Our Vision

Provide SBTs as a dynamic reputation passport
≡≡≡
for all Web3 users which enables decentralized
organisations to thrive.

Our Solutions

Metopia offers non-transferable token protocol to enable non-financialized governance.

Soul-Bound Protocol

- Communities are able to create, issue, and manage their SoulBound Tokens.

Web3 Passport

- Aggregate on-chain and off-chain data to your Web3 Passport.
- Turn data into metadata for governance and membership incentives.

Governance Space

- Customizable governance strategies based on metadata.
- Customizable integrations with financial assets & non-financialized contribution.

LaunchPad

- Creators and founders can launch a DAO with an NFT collection auction / sales and bootstrap their treasury with sales proceeds.

Treasury Service

- DAO members can participate in the management and spending of the community treasury fund for growth.

A brief history of Soulbound Tokens

A SoulBound Token is a **non-transferable , expiable, revocable** badge representing an identity using the blockchain. There are real life implications for SBTs.

Badges

There are a few reasons
for badges in Web3

Earned

Badges are earned
through participation,
collaboration, and
building, not purchased.

Full autonomy

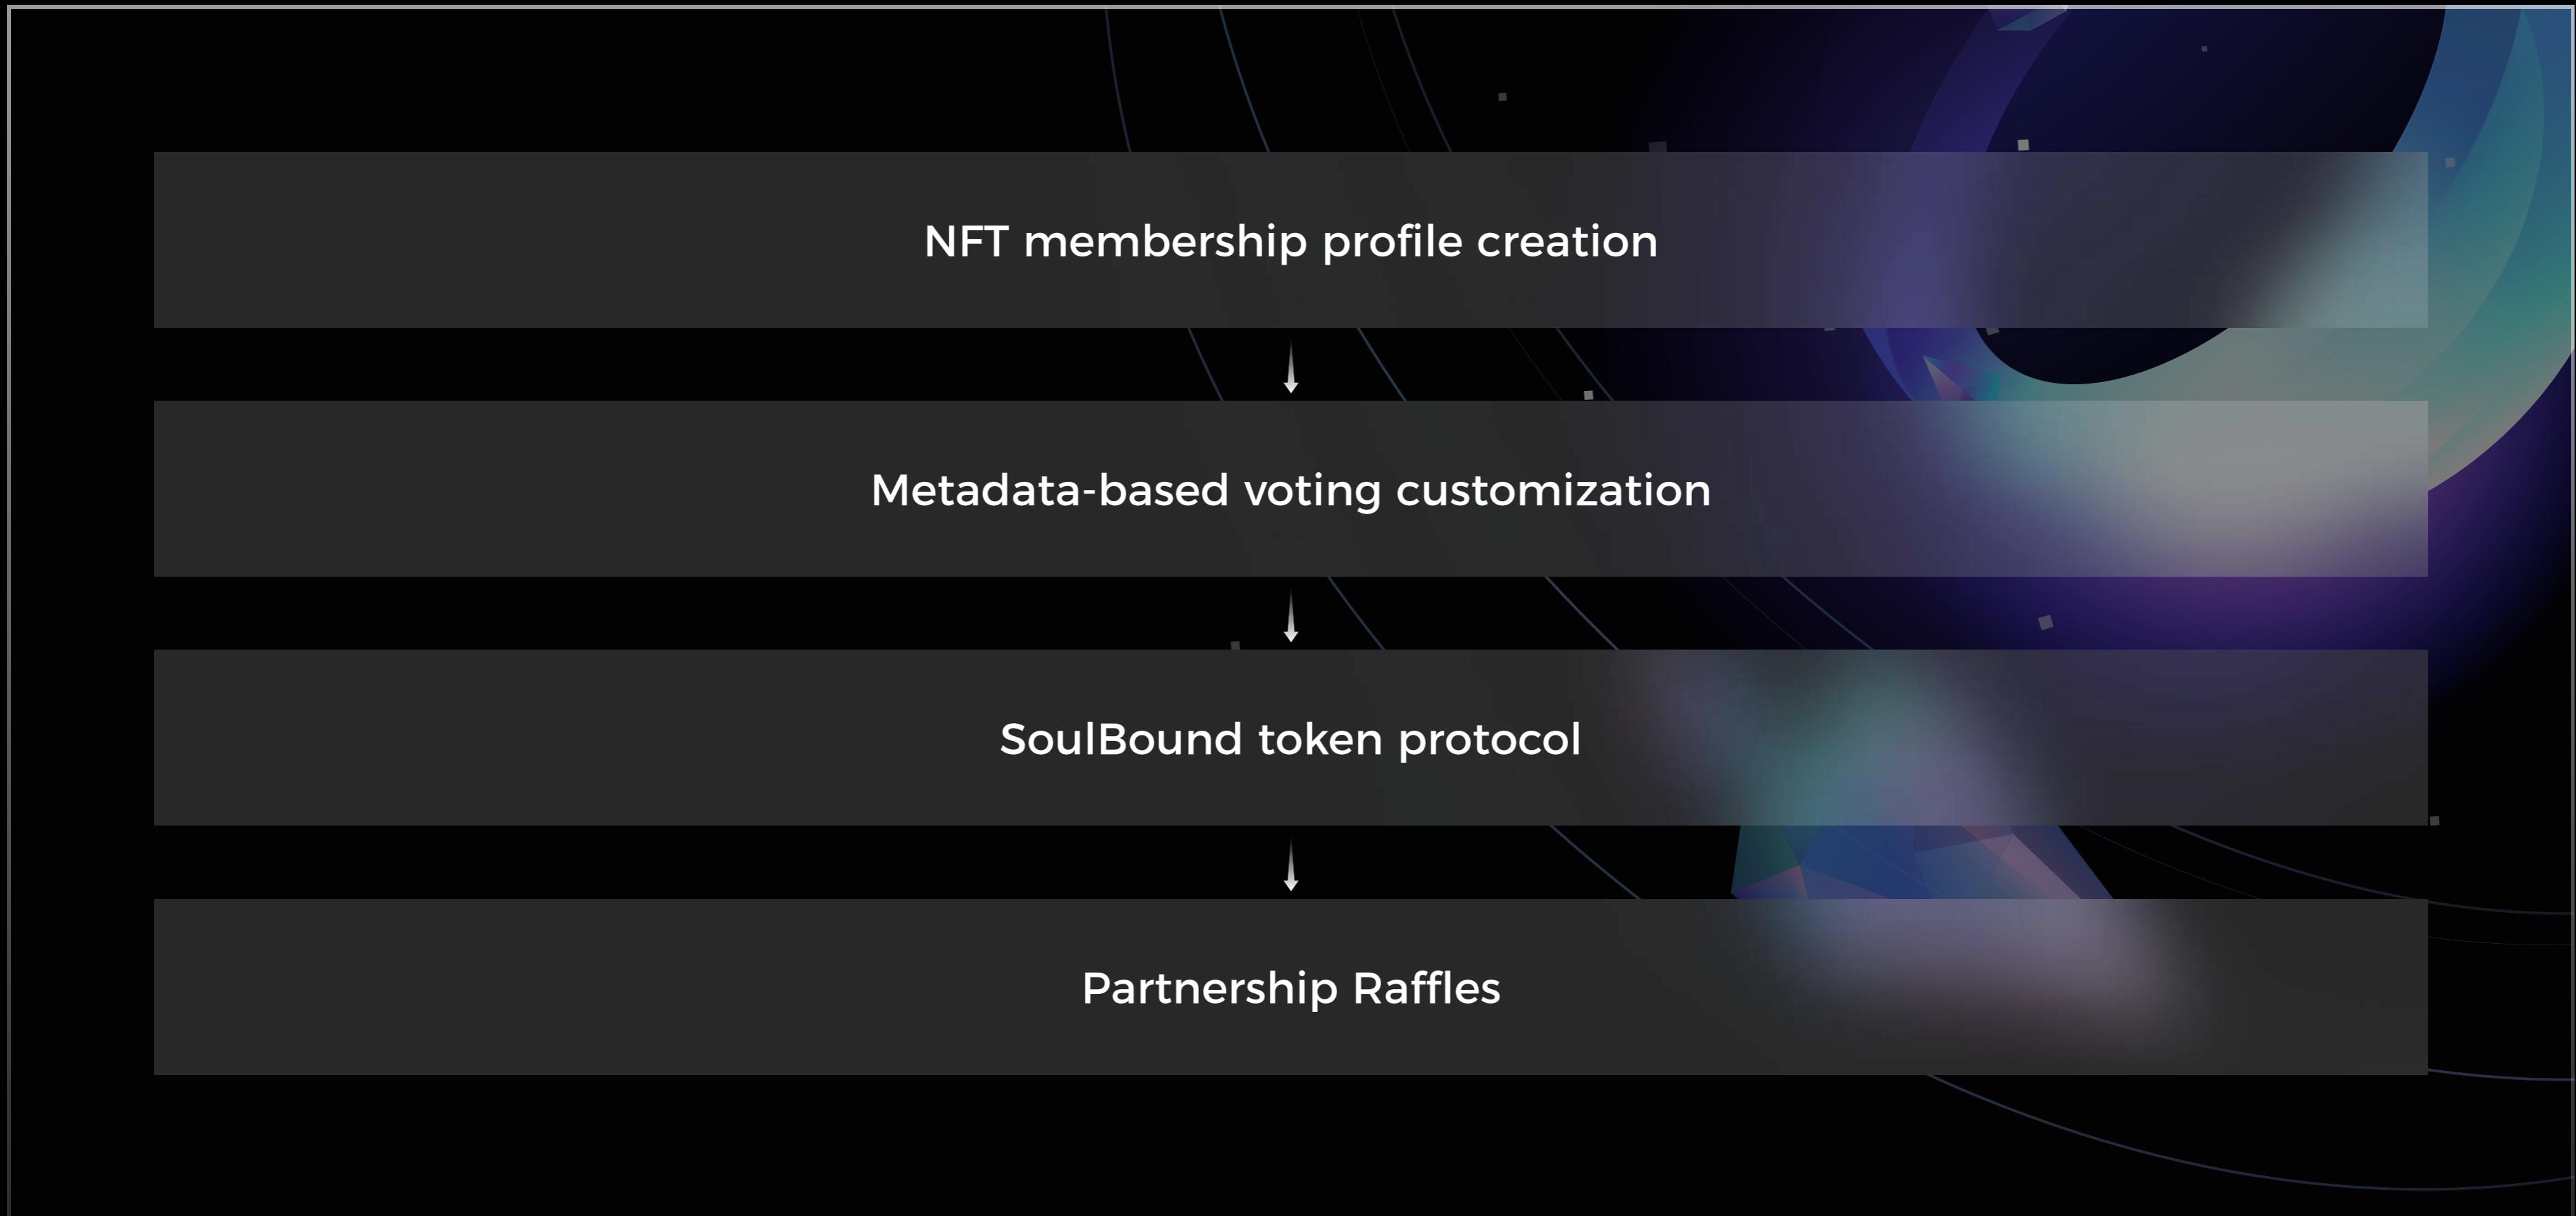

Communities issue
badges at their disposal,
having full autonomy of
the operations of the
distribution.

Updatable

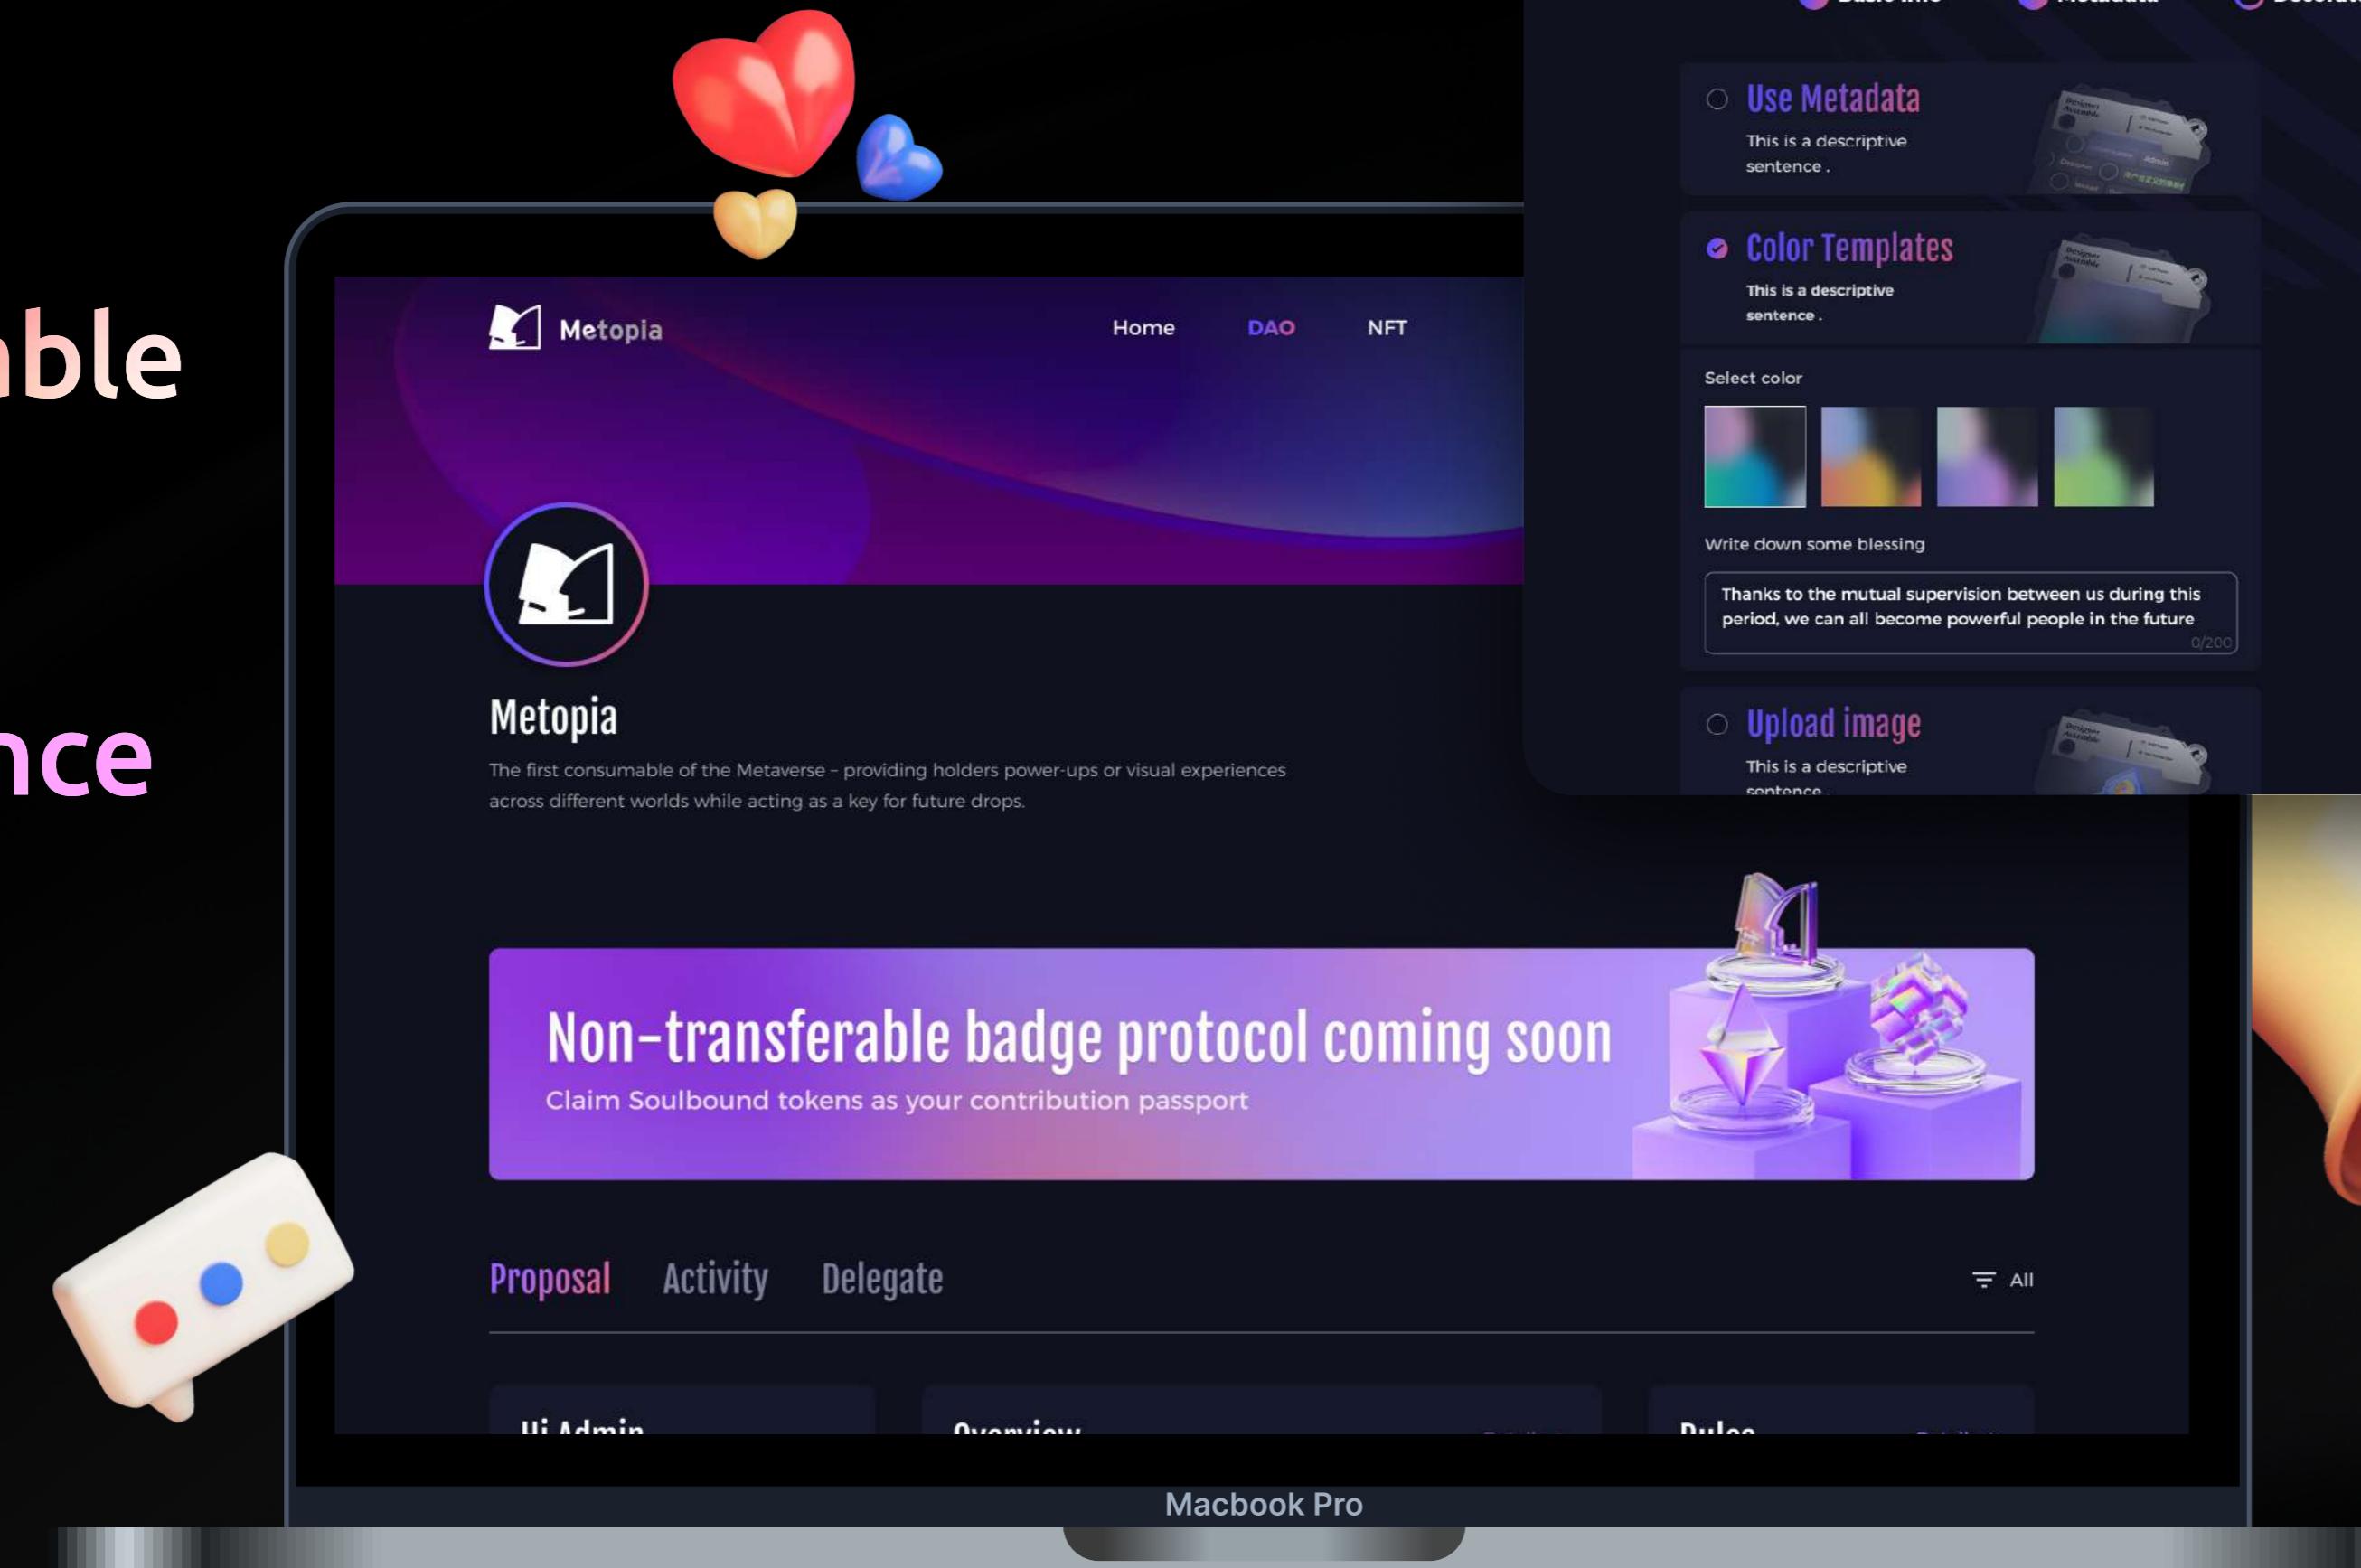

Traits, use-cases and
metadata are
updatable, so users do
not have to mint
multiple badges.

utility

Use cases

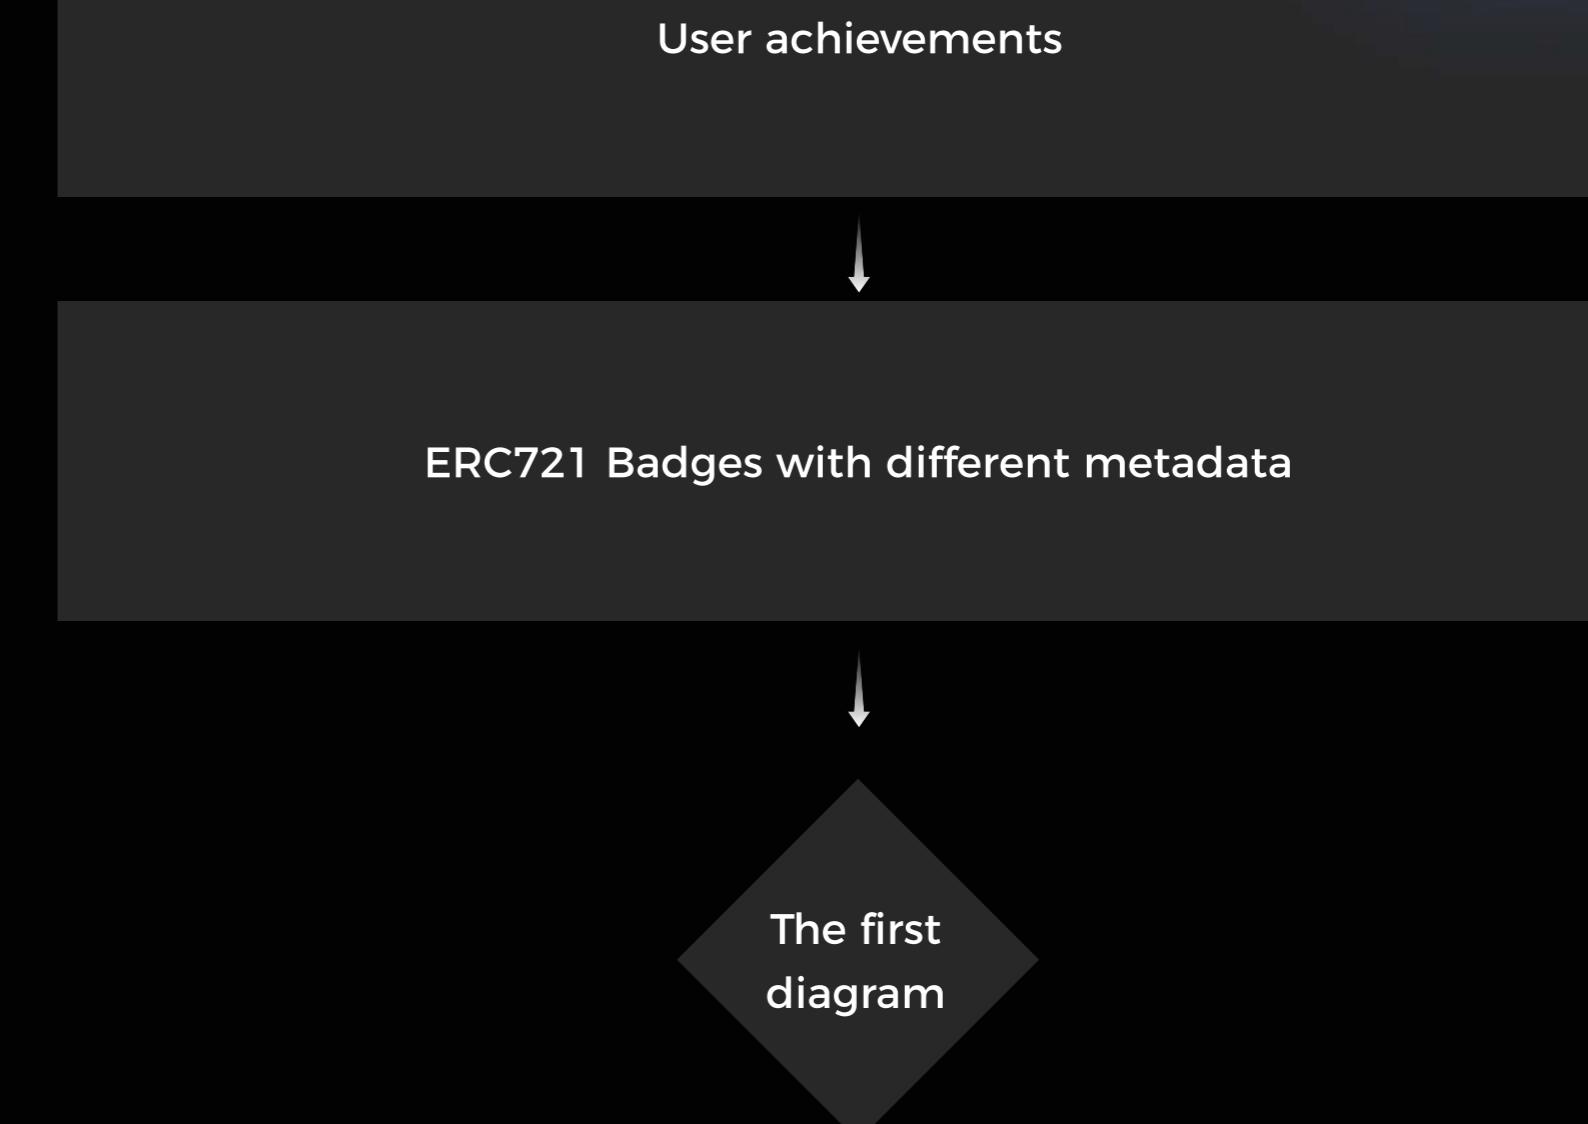

NFT community governance

An NFT community wants to provide a customized NFT governance strategy. The voting power increases correlated to the rarity of the holdings.

Non-financialized governance

A non-financialized community wants to allow dedicated members to join the decisions.

Appendix

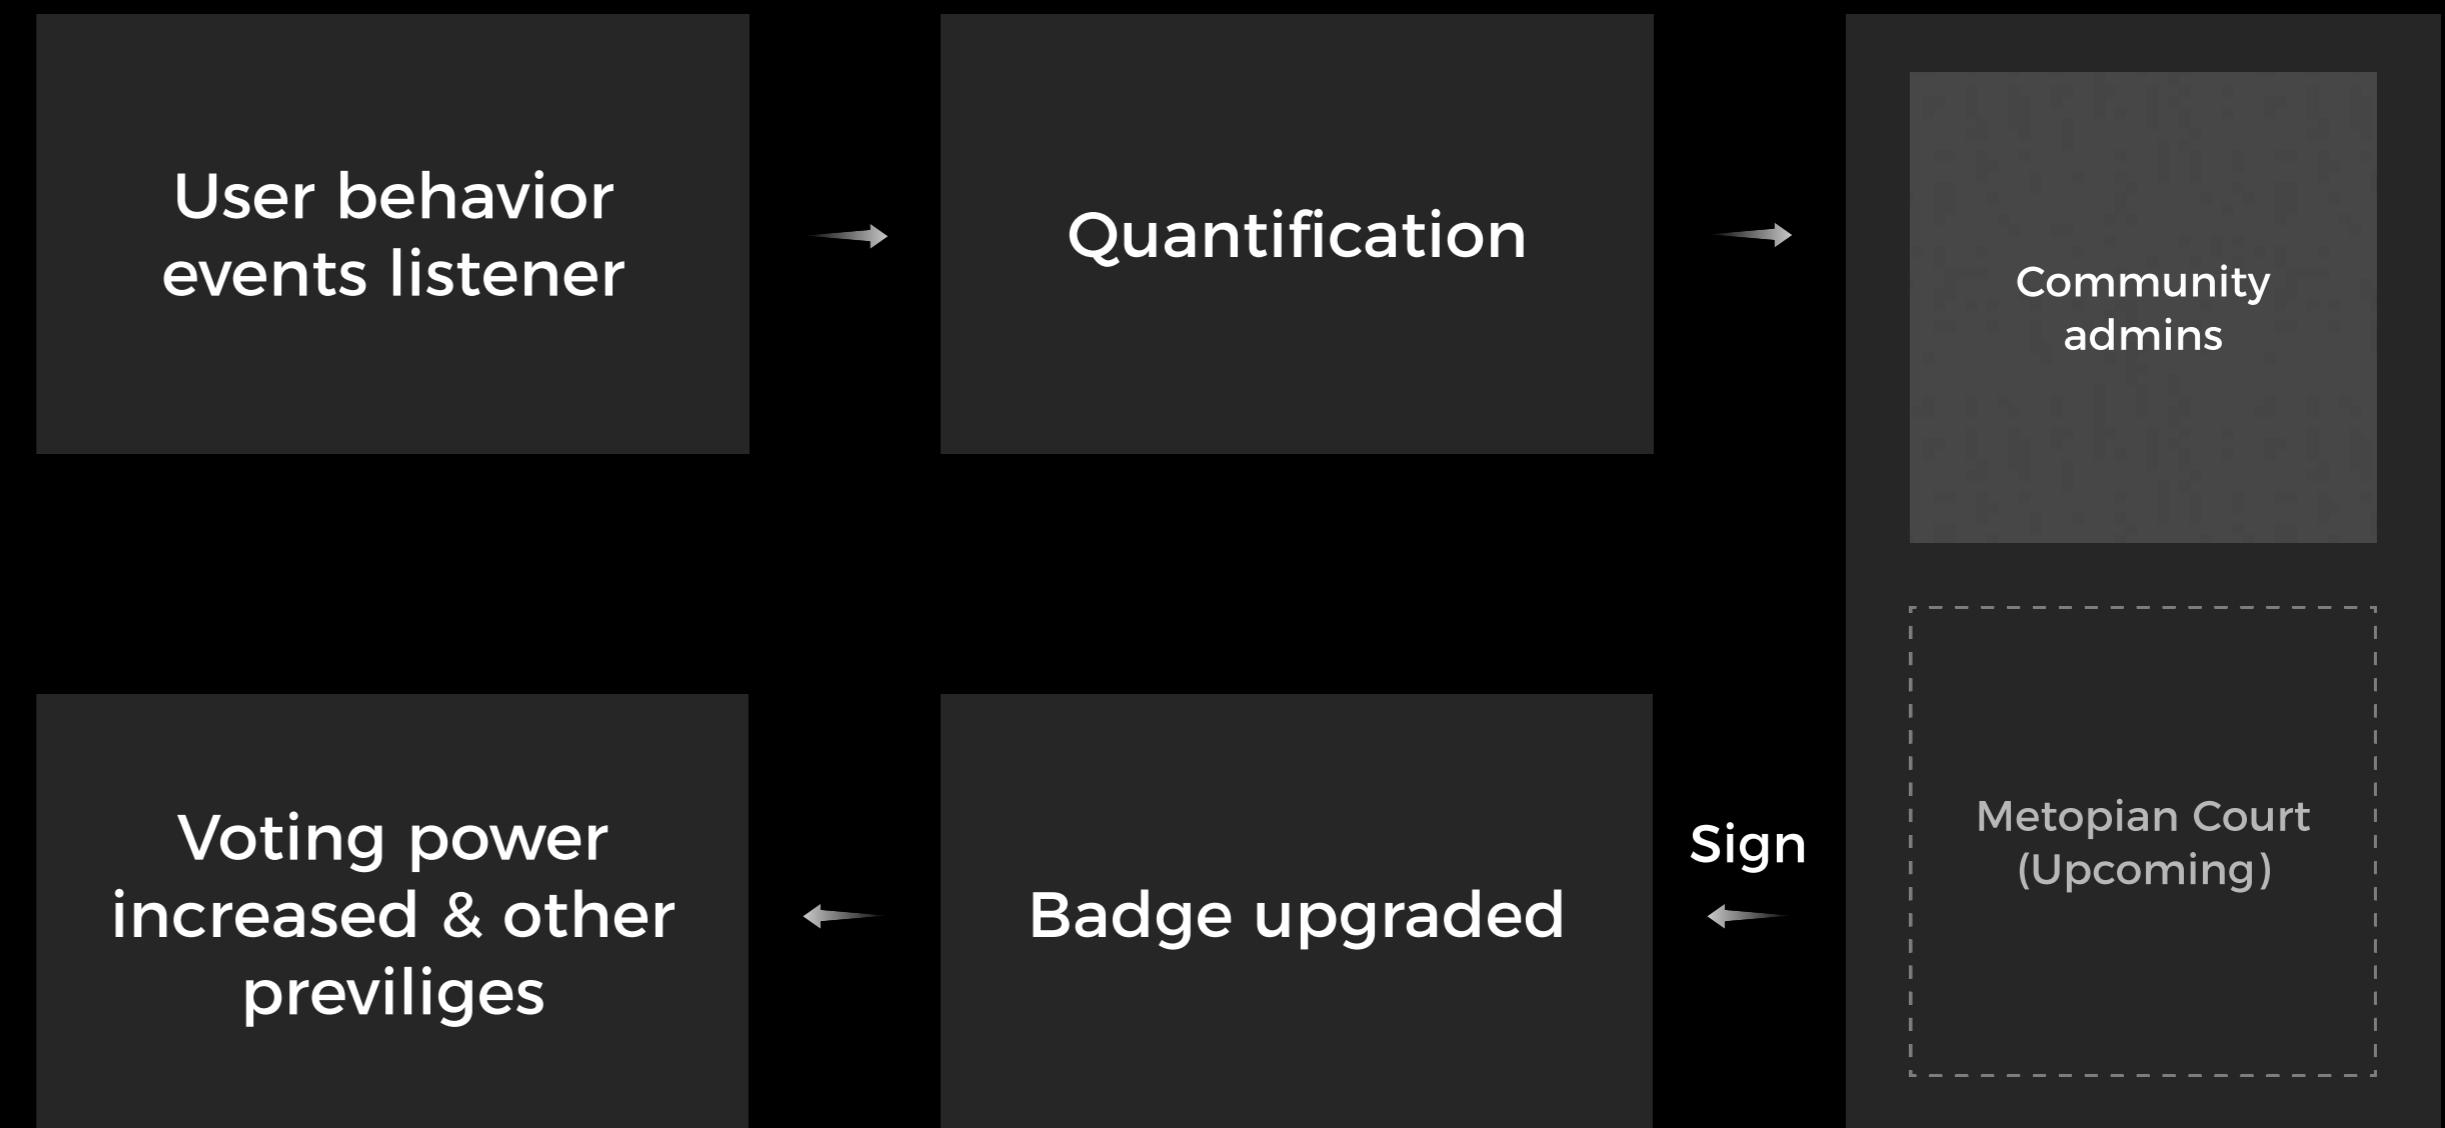

DAO / Governance / SBT Protocol

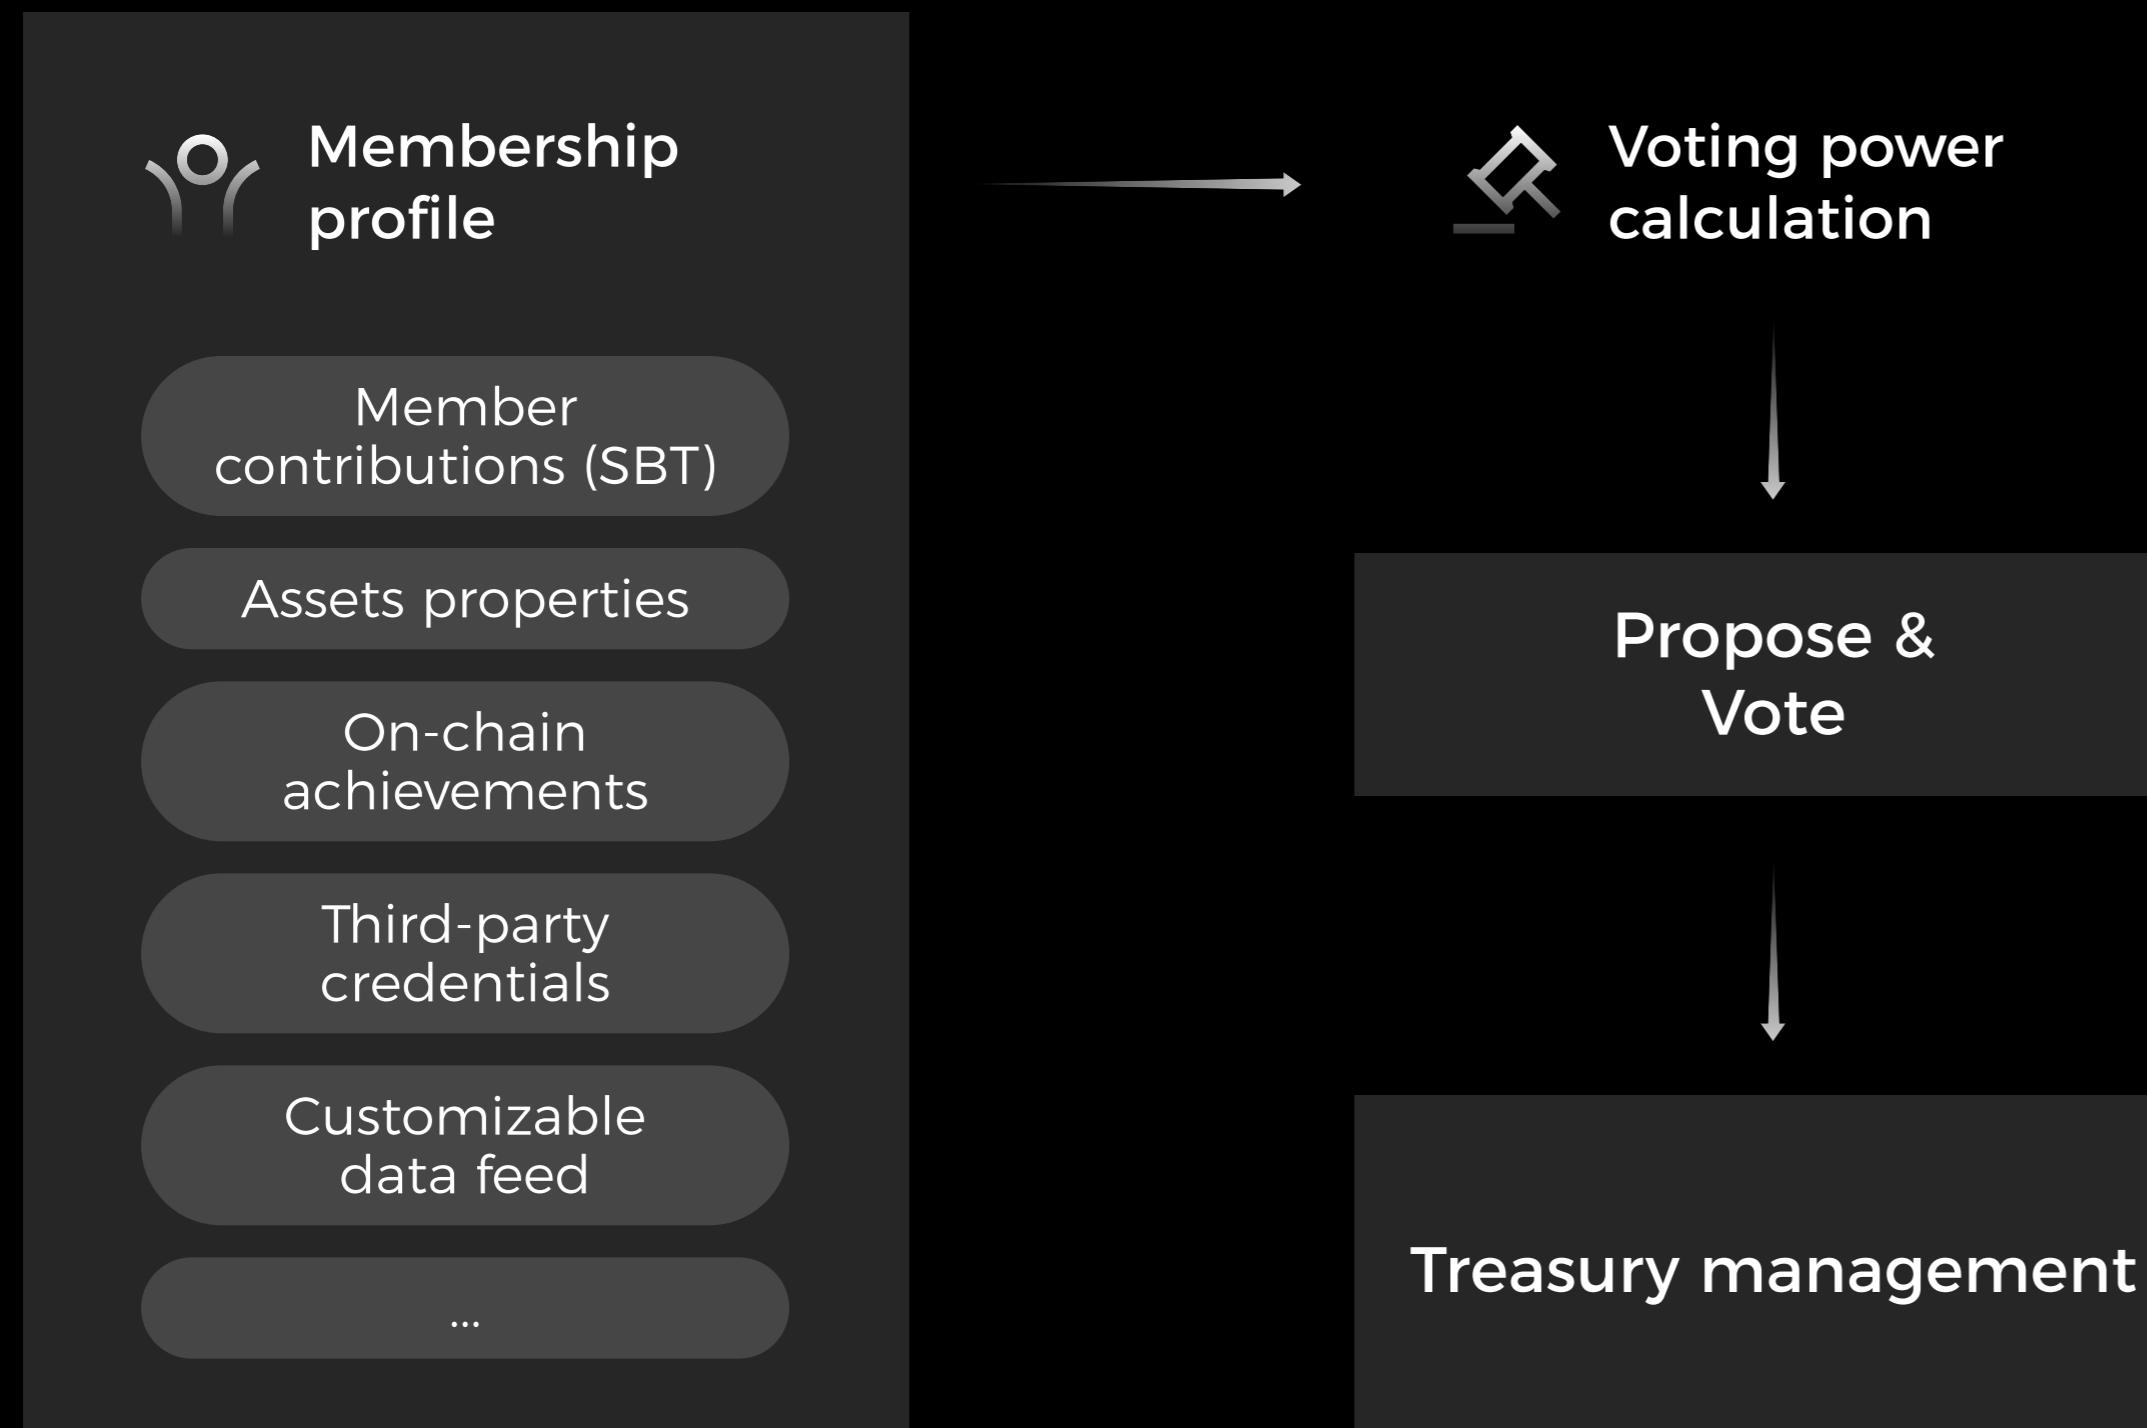

All-in-one Reputation Badge

We are non-financial reputation keepers

- Tracking the behaviors of DAO members;
- Standardized non-transferable NFT with upgradable properties to store member data;
- Data is secured by the moderators' signature;

Governance with criteria

Instead of the regular settings of a unified VP for each token, we are utilizing members contributions & assets innate properties to calculate governance power.
